

ABSTRACT:

An interactive translation system (10) includes a front end (40), a back end (42), and a user interface (16). The front end (40) is operable to identify source elements (86) in a source file (24). The back end (42) is operable to generate a translation file having translation elements corresponding to translation of said identified source elements (86) and having an interface (16) for receiving inputs for modifying said translation.
